About Silensec

Silensec is an international Information Security Management, Training and Technology Company headquartered in Cyprus and with offices in the United Kingdom, Kenya, Ireland, Canada and the USA.

Established in Sheffield (England) in 2006, Silensec specializes in the design, development and delivery of products and services in the domains of IT Governance, Security Audits and Assessments, Value-Added System Integration, Managed Security with a 24x7 SOC, and Security Training. Silensec is ISO 27001-certified by the British Standards Institution (BSI).

SECURITY GOVERNANCE

Compliance with best practice and regulatory security standards such as ISO 27001, ISO 22301, PCI DSS, including the delivery of gap analysis and process audits.

PENETRATION TESTING AND VULNERABILITY ASSESSMENTS

Technical security audits from vulnerability assessment to advanced penetration testing including source code review, networks and systems architecture review, firewall assessments, social engineering and more.

SECURITY MONITORING AND PREVENTION

Deployment and integration of protection, detection and reaction solutions from network firewalls, intrusion detection systems, database and web application firewalls up to endpoint security, log management systems, SIEM and Data Loss Prevention (DLP) solutions.

SECURITY TRAINING AND CYBER EXERCISES

Silensec has developed a portfolio of over 20 training courses across different security domains from ethical hacking to mobile forensics, reverse engineering and malware analysis up to security management and security standards compliance. Silensec courses have been delivered to professionals and multinationals worldwide.

CYBER RANGESTM is a next-generation military-grade full-content-lifecycle cyber range for the hands-on development of cyber capabilities and the assessment of competencies and organizational cyber resilience. Based on cloud technology, CYBER RANGES powers the delivery of even complex large-audience cyber drills and deep-dive immersive training exercises, including the realistic simulation of cyberattacks through its proprietary Injector Engine technology.

CERT & CSIRT DEVELOPMENT PROGRAMME

Establishment and advisory services for industry and government Computer Incident Response Teams (CIRT): from the definition of CIRT Services and the development of CIRT processes, roles and responsibilities and associated documentation up to design, installation and testing of the required CIRT ICT infrastructure.

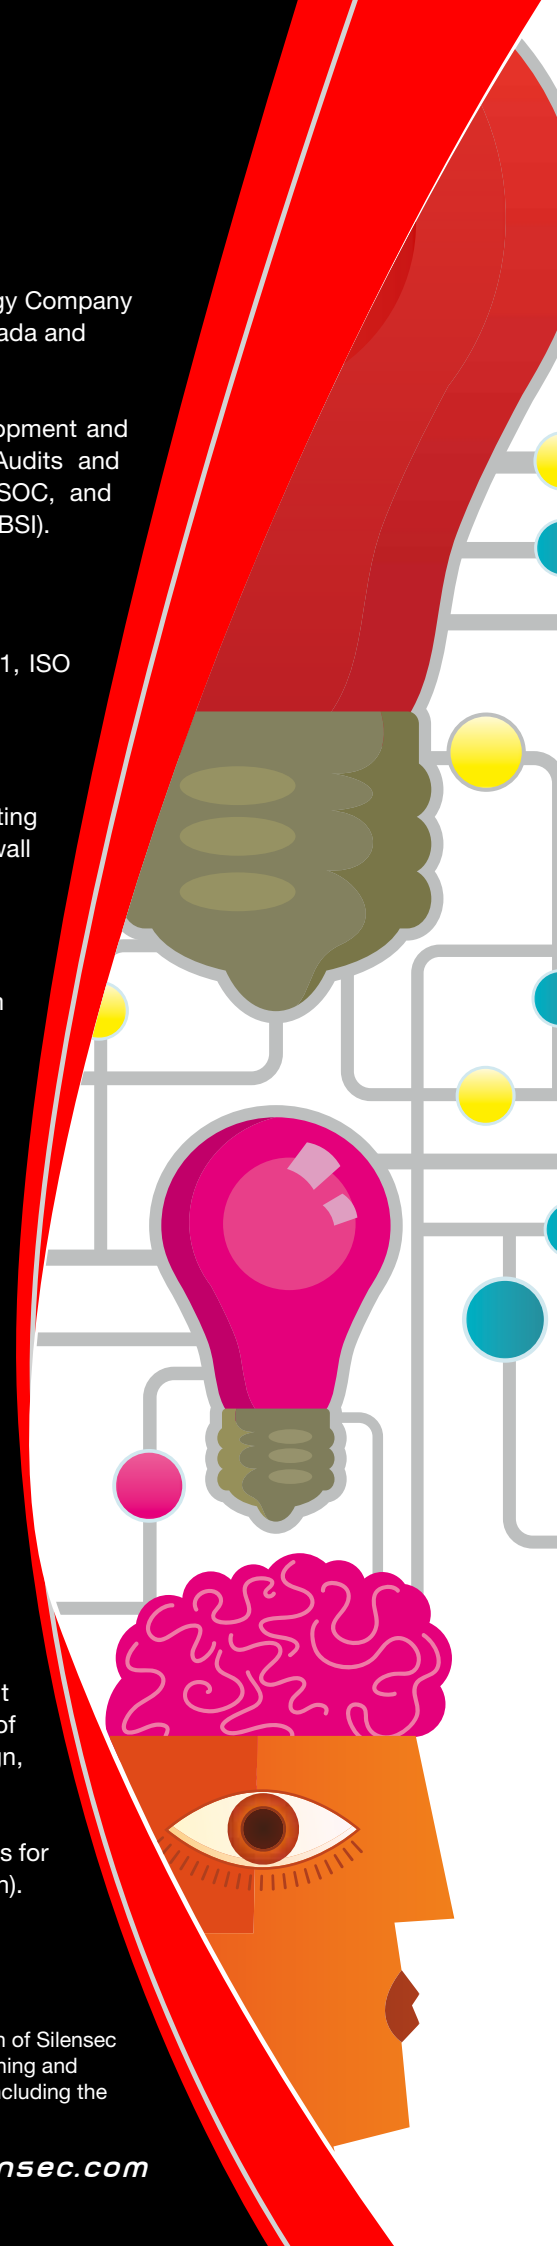

Silensec also develops and delivers Cyber Drills and Cyber Attack Simulation exercises for CIRTs worldwide in collaboration with the ITU (International Telecommunication Union).

IS 616580

The Information Security Management System applies to the provision of Silensec and CYBER RANGES products and services, information security training and consultancy services and 24/7 SOC and managed security services including the support functions of IT, Sales, Finance and Administration.
